

Field	Description
Bug ID	BUG-003
Bug Title	Checkout can be completed with an empty shopping cart
Module	Add To Cart
Environment	Browser: Chrome Intel Mac OS X 10_15_7 OS:MAC OS 13.7.8 (22H730) Google Docs
Severity	Medium
Priority	High
Status	New
Reported By	M.Ayyan Irfan
Date	3 July 2026

Bug Description

The application allows users to successfully complete the checkout process even when the shopping cart is empty. Users can proceed through the checkout flow, enter shipping information, and place an order without adding any products to the cart. This violates the expected business logic of the checkout process.

Preconditions

- User is logged in using valid credentials (standard_user / secret_sauce).
- The shopping cart is empty.

Steps to Reproduce

1. Launch the SauceDemo application.
2. Log in using the following credentials:
 - Username: standard_user
 - Password: secret_sauce
3. Ensure that no products have been added to the shopping cart.
4. Click the Shopping Cart icon.
5. Click the Checkout button.
6. Enter valid values for First Name, Last Name, and Postal Code.
7. Click Continue.
8. Click Finish.
9. Observe the checkout result.

Expected Result

The application should prevent users from initiating or completing the checkout process when the shopping cart is empty. An appropriate validation message should be displayed, or the Checkout button should be disabled until at least one product has been added to the cart.

Actual Result

The application allows the user to complete the checkout process successfully and displays the order confirmation page, even though no products were present in the shopping cart.

Evidence

- Screenshot attached (BUG-003.png) showing the incorrect product title.
